LD 2086

Good afternoon, I am testifying against it and request an ought not to pass on the amendment to 2086 describing what a machine gun is.

After reading the amendment I find it is way too vague and over reaching in it's scope. Many modern firearms are semi-auto and the factory installed triggers are not always the best for that particular firearm.

In the both the hunting and sport shooting communities, many owners make or buy modifications to tailor the gun to the use they purchased it for. None of those actually change the rate of fire but do assist the owner to fit the discipline they use it for.

The amendment would make every one of them liable to be arrested and or their property confiscated even though they never committed or ever had any intent to commit a crime.

This type of law does not reduce crime or criminal activity but it does turn normal, law abiding residents into criminals for no reason.

Please vote ONTP
